Included are 3 foldables for practicing next dollar skills with a holiday theme. I included color and black and white versions depending on whether you are saving ink and want the students to color them. It would also allow you to quickly make a teacher model without having to color yourself. 😊 One has prices below \$5, one up to \$10 and one has 2 items above \$10.

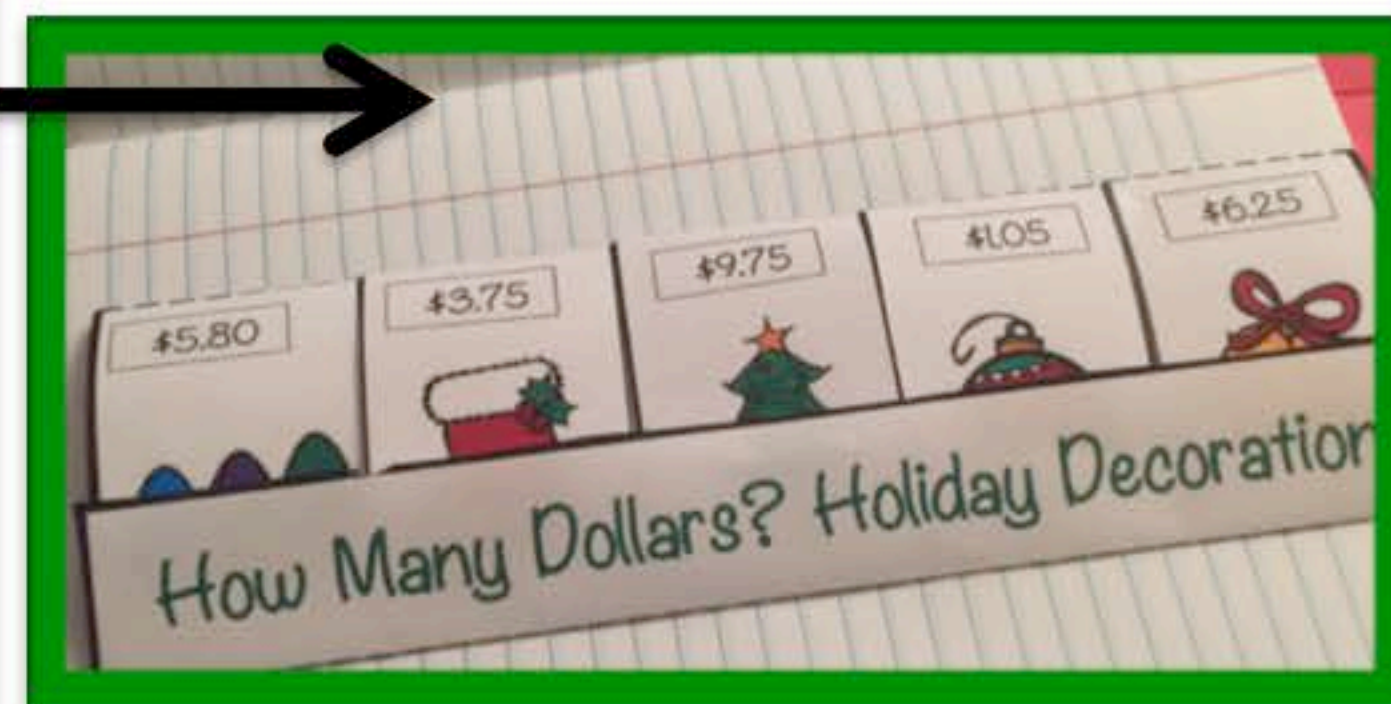

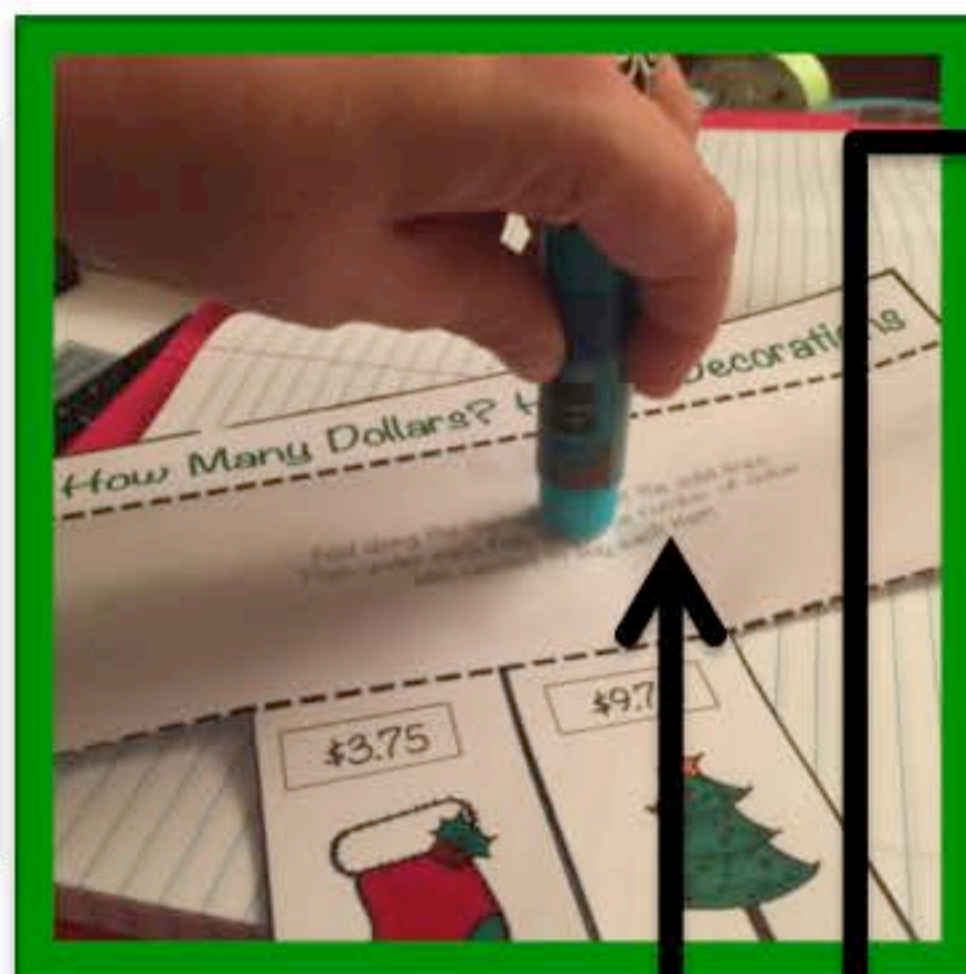

Thank you for your support of the blog and my store and have a wonderful holiday!!

--Chris

DIRECTIONS

There are 3 matchbook foldables included each in color and in black and white. They can be used with interactive notebooks or as standalone activities. They are designed to have students practice using the next dollar up strategy to determine how much money they need to make a purchase. For each item they round up to the next dollar. For instance, if the item costs \$3.21 they would need (and write) \$4. This strategy allows students to determine if they have enough money to make a purchase they want and to use money functionally even if they can't make change.

Students construct the foldables. The black and white can be colored. Cut on the solid lines -cutting off the excess around the edge and between the flaps. They fold the flaps down and the top over to make a matchbook (see picture below). Then under each flap students write the number of dollars needed to buy the item pictured. To use them in interactive notebooks, simply have them glue the bottom of the matchbook (over the text) to put it horizontally in the notebook.

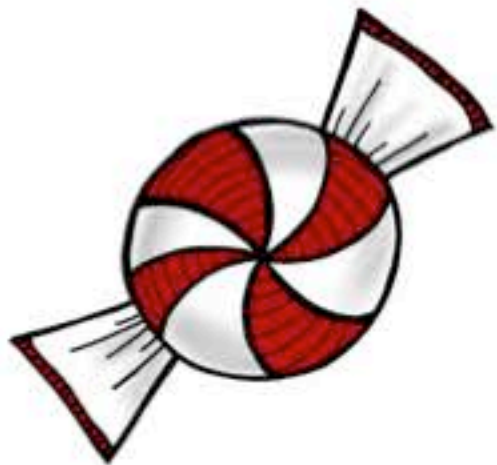

Glue on the back to put
in interactive notebook.
